

Container Chassis S.CF 40' LX

The Practical Optimised Alternatives for 20' and 40' Containers

The S.CF 40' LX offers you the perfect platform when the efficient transport of 20' and 40' containers positioned flush with the rear of the trailer are the top priority.

It carries 20' container positioned flush with the rear of the trailer as well as 2 x 20' containers and 40' tunnel containers.

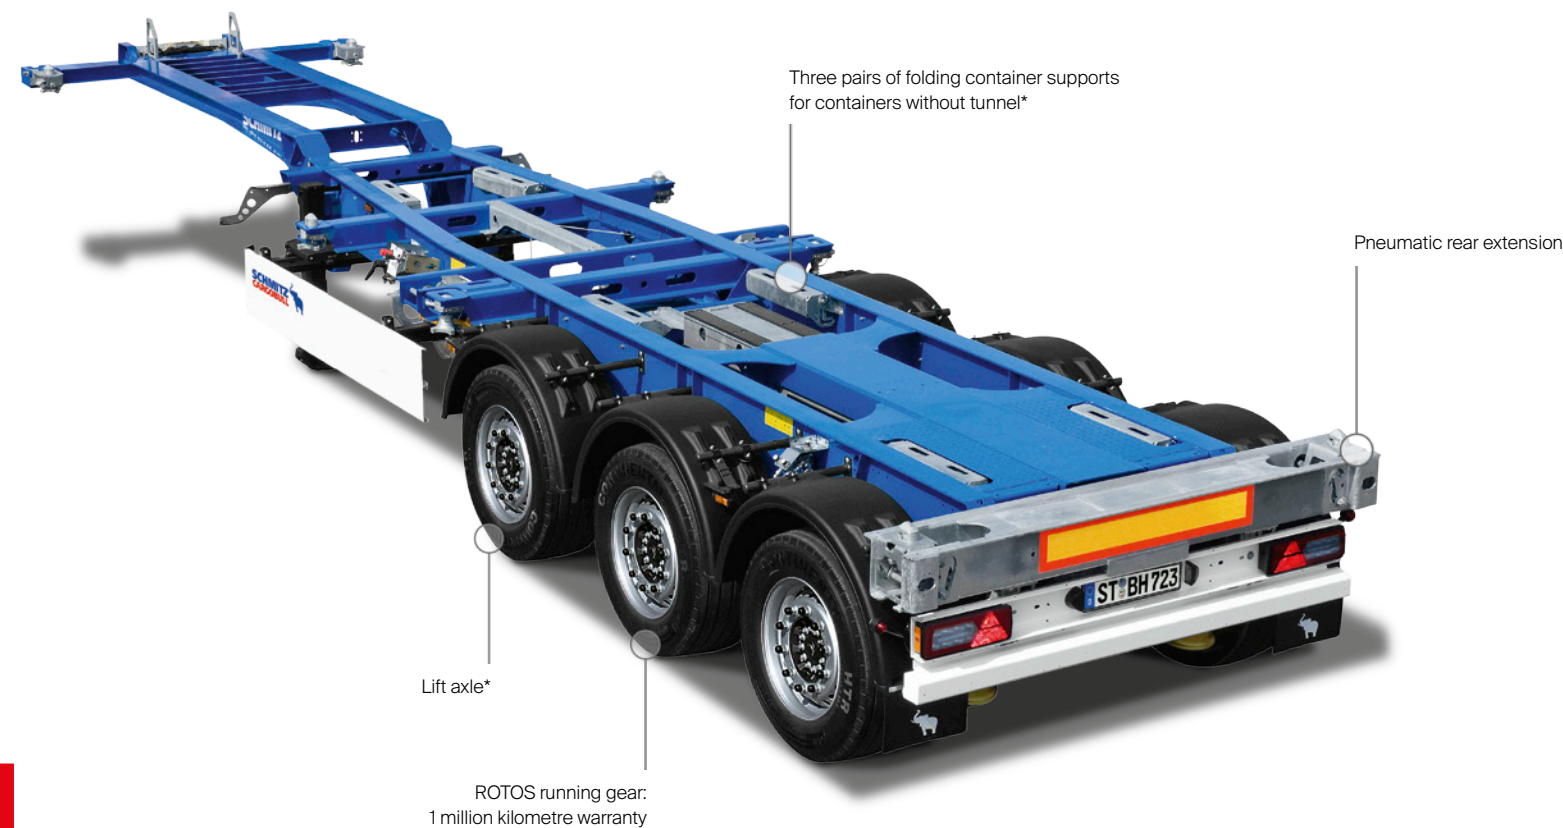

The locking mechanism concept: Standard TWIST LOCKs on the 2nd and 4th container beams, folding locks on the rigid front beam, KLAPP LOCK for securing the front container when transporting 2 x 20' containers and STEP LOCK® as a height adjustment option for 40' containers without a tunnel. The pneumatic central tube rear extension is a user-friendly and time-saving solution and does not require special adjustment for 40' containers without a tunnel.

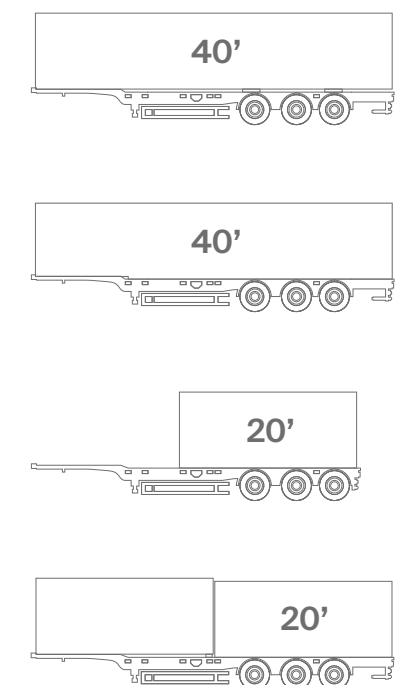

Long service life: Schmitz Cargobull container chassis are constructed using high-strength steel profiles and systematically protected against corrosion.

The **rear extension** pneumatically extends to the selected container position.

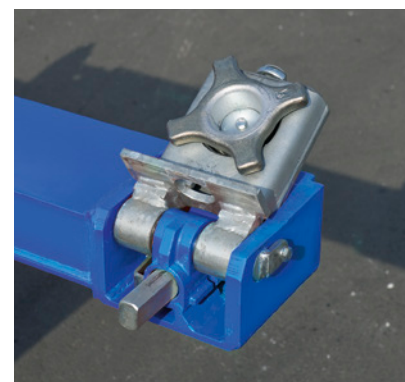

Container layout

Two **STEP LOCKS**** on the rear extension allow you to adjust your semi-trailer container chassis in a matter of moments.

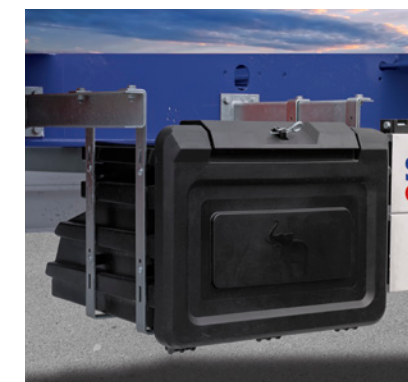

With 2x20' loads the two **KLAPP LOCKS** serve to lock the rear end of the front container.

Folding locks on the rigid front beam for TWIST LOCK or PIN locks for tunnel containers.

The lift **axle*** as a starting aid extends the wheelbase and, thus, increases the pressure on the drive axle.

The sturdy **toolbox*** safely and cleanly stores all necessary equipment.

The container trailer chassis can be equipped with **ferry lashings*** for use with ferry transport.
